## MYBOT

- The Mybot was born to meet common needs of many investors:
- Lack of time to operate manually;
- Lack of discipline necessary to operate manually;
- Diversification of investments in search of superior profitability. The Mybot is an investment support tool.

In the use of the Mybot, Mybot DOES NOT RECEIVE, DO NOT RETAIN, ANY AMOUNT IN MONEY INVESTMENTS FROM THIRD PARTIES. ALL INVESTMENT MONEY IS THE INVESTOR'S AND STAYS IN THE INVESTOR'S ACCOUNT AT THEIR TRUSTED BROKER. Mybot DOES NOT OPEN AN ACCOUNT OR MANAGE ANY INVESTOR'S ACCOUNT. The Mybot IS NOT A MAGIC FORMULA OR A PROFIT GUARANTEE.

# WHAT IS A ROBOT-TRADER?

A robot-trader is software, a program, an algorithm, a code implemented in some programming language (Python, C++ and MQL5 are the most used for this purpose), which receives and processes market data according to pre-established rules, respecting scenarios, indicators, entry and exit conditions and other criteria used for investing, automatically routing orders to the stock exchange.

They carry out a sequence of specific tasks for executing trades in the markets in a fully automated way, without any human intervention.

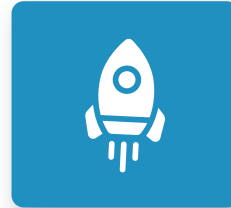

# — WHAT ARE — THE BENEFITS FOR THE INVESTOR?

## **DISCIPLINE**

It disregards the emotional factor that harms any investor

## **VELOCITY**

All operations are performed extremely quickly. Low latency.

## **READINESS**

Peace of mind to invest without missing good opportunities throughout the sessions

## **PRECISION**

No more errors when filling out slips and performing manual operations

## **SIMULATION**

Tests that allow you to simulate the past (backtesting) and also real time (Demo Account)

## **DIVERSIFICATION**

Operate different strategies on the same asset or on different assets simultaneously

# — DIFFERENCE —

## BETWEEN MANUAL AND ROBOT TRADING

### MANUAL OPERATIONS

- The investor follows the market via chart and platform.
- The investor follows the market to find buy and sell signals.
- The investor needs to be online to follow the session and the operations.
- The investor is the one who triggers the orders and manages the risks.
- Operations can be based on guesswork and the investor's emotions end up suppressing their reason.
- If you lose internet connection or if you have a power outage, the investor stops operating and is at the mercy of the market.

### AUTOMATED OPERATIONS

- The investor calibrates the parameters and the robots follow the market for you.
- Orders triggered automatically in milliseconds after the signal given by Technical Analysis
- It does not need to be connected for the robots to work. They operate automatically (in the cloud).
- The robots do all the shooting and handling. Open and close the session as you wish.
- All operations are based on pre-established rules calibrated by the investor.
- The robots function independently of your internet connection and your availability of electricity (in the cloud).

# — HOW TO START — OPERATING WITH THE MYBOT?

It is very simple to start investing with the Mybot, just follow this step-by-step guide:

- Open an account with the Recommended brokers.
- Link mybot to your trading account.

## READY!
